Token Summary

These are the tokens backed by Scenium's verified reserves:

BRAM1
Brabull Mortgage I

Chains ○

Marketcap	Circulation 24h	Token Price ⊘	Reserve utilization
U$1,332	U$1,332	U$1.00	0.21% ⬡
			On-chain Reserve

BRAM2
Brabull Mortgage II

Chains ○

Marketcap	Circulation 24h	Token Price ⊘	Reserve utilization
U$5,502	U$5,502	U$1.00	0.87% ⬡
			On-chain Reserve

Blockchain Distribution

Tokens are spread across multiple blockchains to ensure liquidity and accessibility. The following chart shows this distribution.

Total Chains	Total Tokens	Total Value
1	1	515.45K

100.00%
Ethereum

Access the full version of this report, published quarterly to maintain transparency for investors and users of Scenium-issued tokens.

1. This is a real-time transparency report powered by Fact Finance, showing verified off-chain reserves with automated on-chain updates when thresholds are met.

2. The heartbeat is a timing rule that ensures updates happen at regular intervals. For example, with a 5-minute heartbeat, the system will attempt an update at least every 5 minutes—even without major changes. This prevents data staleness and detects delays or outages quickly.

3. The deviation threshold defines how much the reserve balance must change before a new on-chain update is triggered. For instance, with a 2% threshold, the system only publishes a new value if the balance moves by 2% or more since the last update. This avoids unnecessary updates due to minor fluctuations.

4. Collateral Reserves are real-world assets—such as cash or public securities—held in reserve to back issued tokens. Fact Finance verifies the existence and value of these reserves through connected data sources.

5. Tokens Issued is the total amount of tokens currently in circulation, issued by the tokenization platform. Each unit should be backed by a verified reserve, ensuring a transparent 1:1 or over-collateralized ratio.

6. Excess Collateral is the portion of reserves that exceeds the circulating supply of tokens. It acts as a safety buffer and may allow additional token issuance while maintaining full backing.
